

High School - Physical Science Curriculum Framework

| Grade | Big Idea  | Essential Questions  | Concepts   | Competencies   | Vocabulary  | 2002 Standards     | SAS Standards                                   | Assessment Anchor Eligible Content |
|-------|---|--|--|--|---|--------------------|---|------------------------------------|
| 9-12  | Matter can be understood in terms of the types of atoms present and the interactions both between and within atoms. | How can one explain the structure, properties, and interactions of matter? | Stable forms of matter are those in which the electric potential energy is minimized.  | Construct models showing that stable forms of matter are those with minimum electrical field energy.   | Coulomb's Law<br>Geometries and orbital shapes<br>Lewis dot structures<br>Molecular<br>Octet rule   | 3.2.10B<br>3.4.10C | 3.2.C.A1<br>3.2.C.A5<br>3.2.12.A2               | CHEM.A.1.1.1<br>CHEM.A.2.2.4       |
| 9-12  | Matter can be understood in terms of the types of atoms present and the interactions both between and within atoms. | How can one explain the structure, properties, and interactions of matter? | A stable molecule has lower energy, by an amount known as the binding energy, than the same set of atoms separated; this energy must be provided to break the bond.  | Construct models showing that energy is needed to break bonds and overcome intermolecular forces and that energy is released when bonds form (Enthalpy, Lattice energy are beyond the Eligible Content). | Activation<br>Binding Energy<br>Bond Energy<br>Endothermic<br>Energy<br>Enthalpy<br>Exothermic<br>Lattice energy<br>Physical properties   | 3.2.10B<br>3.4.10A | 3.2.1.C.A2<br>3.2.C.A1<br>3.2.10.A4<br>3.4.10.A | CHEM.A.1.1.4                       |
| 9-12  | Matter can be understood in terms of the types of atoms present and the interactions both between and within atoms. | How can one explain the structure, properties, and interactions of matter? | Each atom has a charged substructure consisting of a nucleus, which is made of protons and neutrons, surrounded by electrons. The periodic table orders elements in increasing number of protons and places those with similar chemical properties in columns. | Use the atomic model and the periodic table to predict and explain trends in properties of elements.   | Atomic radius<br>Charge<br>Chemical<br>Configuration<br>Effective nuclear charge<br>Electron affinity<br>Electronegativity<br>Electrons<br>Elements<br>Energy<br>Ionization<br>Neutrons | 3.1.10C<br>3.4.10A | 3.2.10.A1<br>3.2.C.A1<br>3.2.C.A2               | CHEM.A.2.1<br>CHEM.A.2.3           |
