Introduction

Biology Module B: CELL CYCLE and REPRODUCTION, is one of four sections of Module B of the Biology Keystone Exam. The content and assignments are organized in a manner consistent with the Pennsylvania Keystone Biology blueprint. In Biology Module B, the theme of continuity and unity of life is explored through four big ideas. Students address the big ideas of cell growth and reproduction, genetics, the theory of evolution, and ecology through the exploration of the following essential guestions:

- · How do organisms live, grow, respond to their environment, and reproduce?
- How are the characteristics of one generation passed to the next?
- · How can individuals of the same species and even siblings have different characteristics?
- How can there be so many similarities among organisms yet so many different kinds of plant, animals, and microorganisms?
- How and why do organisms interact with their environment and what are the effects of these interactions?
 The resources in this Module will enable students to reinforce the concepts within the CELL CYCLE and
 REPRODUCTION as well as resources for teachers to utilize in the classroom. This section will focus on the question:
 How do organisms live, grow, respond to their environment, and reproduce?

Biology B Cell and Cycle Reproduction

Section Overview: Cell and Cycle Reproduction	In Biology Module B, the theme of continuity and unity of life is explored through four big ideas. In the first section of Cell and Cycle Reproduction you will focus on the cell cycle to compare and analyze the stages and the outcomes of the cell cycle. You will evaluate the processes and outcomes of mitosis and meiosis and analyze and predict how genetic information is inherited. You will use models to describe and communicate their understanding of the content.						
The Cell Cycle and Mitosis		will model the events that atch videos, complete a	ū	• • •		•
